- 1 Read the text and identify if the statements below are TRUE/FALSE/NOT GIVEN One of the most important aspects of Counter-Strike: Global Offensive is the map pool. Since the core mechanics are the same for every player in the game, the variety in CS:GO comes from the ways each player and team approach each map. The competitive CS:GO pool consists of seven maps. All of them have gone through changes and sometimes even full reworks throughout the years. Each one is unique, yet they all manage to take advantage of the CS:GO mechanics to deliver an amazing experience. While every map is complex enough for a complete guide of their own, this CS:GO Map Guide will take you from beginner to winner in no time. Mirage as a map follows all of the standard conventions of CS:GO maps. It has four main areas of contact with one being an open Mid. The map is Counter-Terrorist sided, but not by much. Mirage is the only original Counter-Strike map to not be full reworked. Inferno is a classic map in CS:GO. The corridor-based gameplay has made for a very interesting evolution over the years. Inferno has received a rework which opened the chokes up slightly, but its reputation as a heavy utility map is still intact. The map is historically CT sided, but has recently come closer to even. Train is one of the more unique CS:GO maps. Its incredibly long sightlines make the map an AWP playground. Additionally, all but one of the T entrances to the bombsites are on low ground past chokes. This results in the map being heavily CT sided, although the recent advent of the SG 553 has given the T's long-range options. Nuke has been through tons of iterations in Valve's attempt to balance it. Despite this, it's still the most one-sided map in CS:GO competitive play. The advantageous defensive angles and tight choke points around the map make sites hell to take. Additionally, the Outside half of the map is inaccessible without a wall of smoke grenades. As the newest addition to the CS:GO competitive map pool, Vertigo has undergone quite a bit of scrutiny. After countless updates, the map has finally started to be accepted. Vertigo is a slightly T sided map. It also has a double layered format, but the structure is very different from Nuke. Most of the maps were created in 2015 in China and America.
